

bankapp.server.Account

```
classDiagram
    class Account["bankapp.server.Account"]
    class Admin["bankapp.server.Admin"]
    class User["bankapp.server.User"]
    Admin --|> Account
    User --|> Account
```

The diagram illustrates a class hierarchy. At the top is the 'bankapp.server.Account' class. Below it are two subclasses: 'bankapp.server.Admin' on the left and 'bankapp.server.User' on the right. A horizontal line connects the two subclasses, with an upward-pointing arrow from the center of this line to the 'bankapp.server.Account' class, indicating that both Admin and User inherit from Account.
